

WHITMAN - October, 2016

Overview

Whitman is proudly a New Jersey-based environmental, engineering, waste management, and energy consulting firm, specializing in designing and implementing solutions tailored to regulatory requirements and client priorities.

Founded in 1985, by current Principal Ira L. Whitman, Ph.D., P.E. and his wife Audrey, WHITMAN recently celebrated its 30-year anniversary. From a single environmental service line in 1985, to a full turnkey consulting firm with over 70 employees today, Whitman has evolved into an industry leader that has successfully completed thousands of projects in New Jersey and in more than a dozen states across the country. Since our founding, we have remained committed to providing exceptional service by clearly defining our project goals and delivering completed work on time and at a fair cost to our clients.

Our staff is comprised of environmental specialists, engineers, scientists and geologists with broad experience and diverse backgrounds. Whitman's multi-disciplinary team has the experience and dedication to provide practical solutions to many complex problems – whether that be remediating a former industrial site contaminated by years of chemical discharges, performing structural assessments and preparing site plans, or designing an energy efficient lighting, HVAC and electrical system for a local high school.

Whitman's headquarters is located in Cranbury, New Jersey, and our Southern Regional Office is located in Egg Harbor, New Jersey. This year, Whitman announced the opening of a third office in Allentown, Pennsylvania, allowing us to introduce our diverse array of engineering and environmental services to an even wider client base.

At Whitman, we invest in, train and develop our staff to achieve their greatest personal and professional potentials, while maintaining a culture of respect, passion and professionalism and applying our core values - teamwork, knowledge, innovation, integrity and positive attitude - to everything we do.

Our services include, but are not limited to, preliminary assessments; site and remedial investigations; full scale remediation; asbestos survey, design and monitoring; turnkey soil and groundwater remediation; storage tank management; site/civil engineering; structural engineering; mechanical, electrical and plumbing (MEP) engineering; fire protection; and energy consulting services.

Whitman's Environmental services have recently expanded to include Hazardous and Non-Hazardous Waste Management, Environmental, Health & Safety Compliance, and Wetlands Delineation and Permitting. Our Engineering Services have also expanded to include Process Engineering, Chemical Engineering and Plant Engineering.

Whitman's experience in providing Renewable Energy Services has also increased exponentially over the past 10 years: this year, Whitman announced that the firm reached the milestone of 200 MW of photovoltaic projects up and down the East Coast.

Whitman continues to identify new and emerging business markets and services, while constantly growing and fine-tuning our current array of services. From municipal buildings to hotels, new development to remodeling, we strive to be a valued member of your business, legal and development team. We believe that our excellence doesn't go unnoticed – much of our new business comes from the referrals of other satisfied clients. We are Whitman - - - "Creating Solutions. Exceeding Expectations."
